

EXPENSE TRACKER

Introduction

A beginner-friendly expense tracker in Python.

Designed to promote smart money management through simple, interactive features.

Provides clear visuals for better spending insights.

Objective

- ✓ Allows users to log daily expenses and categorize them.
 - ✓ Tracks expenses, income, and savings.
 - ✓ Provide pie charts and bar graphs showing expense distribution.
 - ✓ Alert users when they exceed a predefined budget.
 - ✓ Allow users to generate monthly/annual financial reports.
- 

Tools & Technologies

- SQLite – Lightweight local database
- Pandas – Data manipulation
- Matplotlib – Data visualization
- Datetime – Date handling

Database Design

- Database Name: finance.db
 - Table: expenses
 - Columns:
 - id: INTEGER, Primary Key
 - date: TEXT
 - amount: REAL
 - category: TEXT
- 

Features

- ✓ Add Expenses
 - ✓ Expense Categorization
 - ✓ View Expense History
 - ✓ Pie and bar chart visualization
 - ✓ Filter Expenses
- 

Input Format

- Users input expenses in the format:
 - YYYY-MM-DD Category Amount
 - Validates format and stores in database
 - Custom number of inputs
- 

Expense Summary

- Displays all stored expenses with:
 - Date
 - Category
 - Amount
 - Calculates and shows Total Expenditure
- 

Filter Expenses

- Two filter options:
 - By Year
 - By Month
 - By Category
 - Displays matching records with total
- 

Visualization

- For each year:
 - Pie Chart – Expense split by category
 - Bar Chart – Amounts per category
 - Enhances data insight
- 

Conclusion

- Expense Tracker simplifies financial management
 - Helps users track & categorize spending efficiently
 - Visual insights to better understand spending habits.
-
