[April, 2025]

SRM University AP, Neerukonda, Mangalagiri, Guntur.

Andhra Pradesh – 522240

Certificate

Date: 22-04-2025

This is to certify that the work present in this python project entitled “PERSONAL FINANCE TRACKER” has been successfully carried out by V. Vennela, S. Pavan Kumar, M. Trishabhinaya under my/our supervision. The work is genuine, original, and suitable for submission to the SRM University – AP for the award of Bachelor of Technology/Master of Technology in School of Engineering and Sciences.

Prof. K. Kavitha Rani

Acknowledgement

The satisfaction that accompanies the successful completion of any task would be incomplete without introducing the people who made it possible and whose constant guidance and encouragement crowns all efforts with success.

We are extremely grateful and express our profound gratitude and indebtedness to our project guide, K. Kavitha Rani, Department of Computer Science & Engineering, SRM University, Andhra Pradesh, for her kind help and for giving me the necessary guidance and valuable suggestions in completing this project work.

Abstract

This project presents a **Personal Finance Tracker**, a beginner-friendly Python application designed to help users manage their income, expenses, and budgets efficiently. The motivation behind the project is the increasing need for individuals to track personal finances in a simple and organized manner, especially for students and early earners with limited financial literacy tools.

The system is built using Python, SQLite for local data storage, Pandas for data manipulation, and Matplotlib for visualization. The application enables users to log daily income and expenses categorized by type and date, set a monthly budget, and generate both monthly and annual financial reports. It offers clear summaries of financial activities, savings, and raises alerts when spending exceeds the set budget.

A key feature of the application is its graphical representation of expense data through pie and bar charts, helping users visually analyze their spending patterns across categories and time periods. The use of an intuitive menu-driven interface ensures ease of use for individuals with minimal technical expertise.

The project concludes that a lightweight, offline finance tracking tool can empower users to better understand and control their financial habits. Future enhancements may include recurring expense tracking, advanced analytics, and integration with mobile or cloud platforms to increase accessibility and functionality.

Introduction

In today's fast-paced and consumer-driven world, effective personal finance management has become more important than ever. With expenses increasing and incomes often limited—especially for students, young professionals, and individuals with fixed earnings—keeping track of financial transactions is crucial to avoid overspending, manage budgets, and save for future needs. Despite the availability of complex finance applications, many users find them either too advanced or cluttered with features they do not need.

This project addresses this gap by introducing a **Personal Finance Tracker**, a simple yet functional Python-based application that helps users record, analyze, and visualize their financial activities. The tool allows users to add income and expense entries, categorize them, set a monthly budget, and generate detailed reports and visual summaries of their financial performance.

The significance of this project lies in its accessibility and simplicity. Unlike most commercial finance tools that may require user accounts, internet access, or paid subscriptions, this tracker runs entirely offline, uses local storage (SQLite), and is tailored for users with basic computing knowledge.

The scope of the project includes core financial features such as transaction recording, budget setting, monthly summaries, data visualization, and report generation. The purpose is to equip users with an easy-to-use application that promotes financial awareness, encourages better money management habits, and helps maintain control over personal spending patterns.

Methodology

Approach and Tools

The project uses the **Python** programming language due to its simplicity and rich ecosystem. The main tools and libraries are:

- **SQLite3**: For local database storage.
- **Pandas**: For data handling and analysis.
- **Matplotlib**: For generating visual charts.

Functionality Overview

1. **Initialization**: Sets up required database tables (records and settings) for storing transactions and budgets.
2. **Entry Input**: Users can input multiple income or expense records in a structured format.
3. **Budget Management**: A monthly budget can be set and compared against expenses.
4. **Summary**: Displays monthly totals of income, expenses, and savings.
5. **Visualization**: Pie and bar charts represent category-wise and yearly expense analysis.
6. **Report Generation**: Users can generate custom reports by month or year.

Software Requirements

- Python 3.x
- SQLite3
- Pandas
- Matplotlib
- A command-line interface

Implementation

The project was implemented using a modular Python script. Key parts of the implementation include:

- **Database Setup:** An SQLite database is used to store all records persistently.
- **Data Entry Functions:** User inputs are taken via command-line and validated before insertion.
- **Budget Alerts:** Fetches budget from the settings table and compares with current month's expenses.
- **Visualization:** Matplotlib creates dual subplots (pie and bar charts) for yearly expense breakdowns.
- **Report Functionality:** Filters data using Pandas based on selected time frames.

Challenges Faced

- Ensuring accurate user input format.
- Preventing data duplication in the database.
- Creating readable, clutter-free visualizations.
- Handling edge cases (e.g., no data or invalid dates).

Results and Analysis

Key Results

- Users can efficiently record and retrieve financial data.
- Monthly summaries clearly show income, expenses, and savings.
- Visualization helps identify major spending areas and track patterns over time.
- Budget alerts are triggered correctly when expenses exceed thresholds.

Graphical Insights

- Pie charts show category distribution.
- Bar charts highlight category-wise expense values annually.

These visuals help users understand where they spend most and take corrective actions.

Menu:

```
===== Personal Finance Tracker =====  
1. Add Expense  
2. Add Income  
3. Set Monthly Budget  
4. Show Summary  
5. Visualize Expenses  
6. Generate Financial Report  
7. Exit  
Enter your choice (1-7): 1
```

User input:

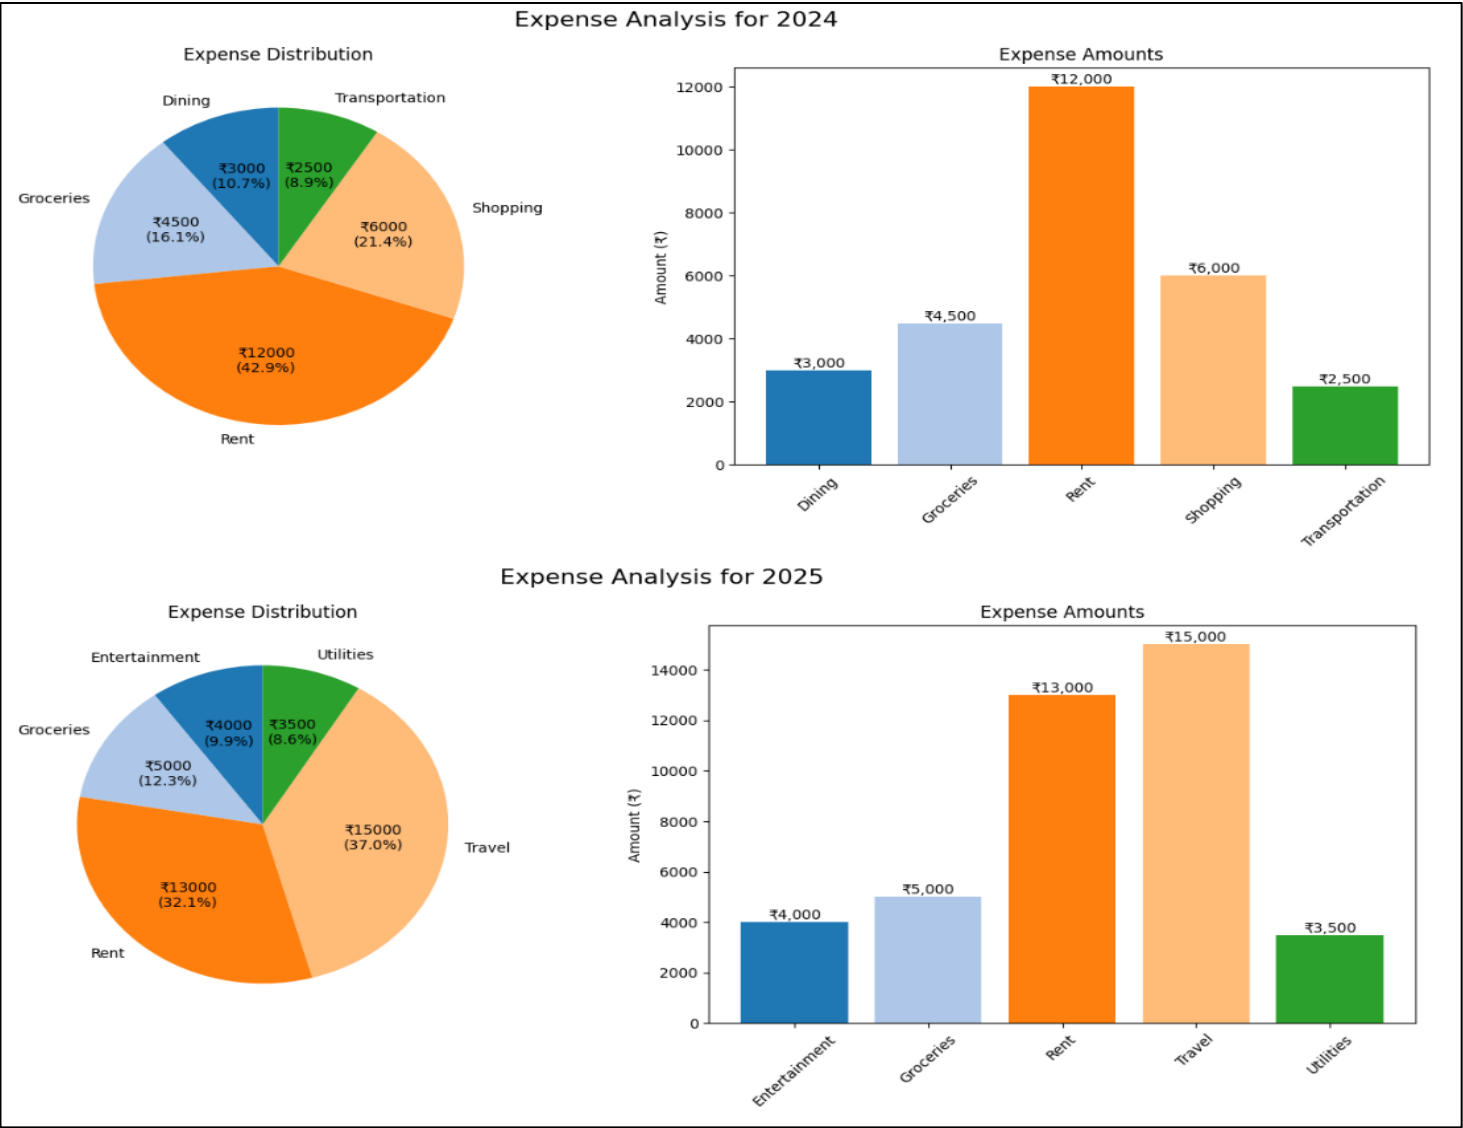

```
How many expenses do you want to add? 10
Enter expense in the format: YYYY-MM-DD Category Amount
> 2024-01-15 Groceries 4500
> 2024-02-20 Rent 12000
> 2024-03-10 Transportation 2500
> 2024-06-05 Dining 3000
> 2024-12-18 Shopping 6000
> 2025-01-05 Groceries 5000
> 2025-03-15 Rent 13000
> 2025-05-22 Utilities 3500
> 2025-08-10 Entertainment 4000
> 2025-11-30 Travel 15000
Expenses added successfully.
```

Show summary:

```
Enter your choice (1-7): 4

--- Monthly Summary ---
type      expense  income  savings
month
2024-01    4500.0  50000.0  45500.0
2024-02   12000.0     0.0 -12000.0
2024-03    2500.0     0.0  -2500.0
2024-04     0.0  10000.0  10000.0
2024-06    3000.0     0.0  -3000.0
2024-07     0.0  15000.0  15000.0
2024-09     0.0   8000.0   8000.0
2024-12    6000.0   5000.0  -1000.0
2025-01    5000.0  55000.0  50000.0
2025-02     0.0  12000.0  12000.0
2025-03   13000.0     0.0 -13000.0
2025-05    3500.0     0.0  -3500.0
2025-06     0.0  18000.0  18000.0
2025-08    4000.0  10000.0   6000.0
2025-11   15000.0     0.0 -15000.0
2025-12     0.0   6000.0   6000.0
```

Goodbye!
```

Discussion

The initial goal was to create an easy-to-use tool to track and analyze personal finances. The project meets its objective by offering features like income/expense logging, budget setting, and insightful reports. The tool works offline, has a minimal setup, and provides meaningful data analysis through visualizations.

Limitations

- It uses a CLI, which may not appeal to non-technical users.
- Lacks advanced features like recurring expenses or forecasting.

Conclusion

The **Personal Finance Tracker** provides a simple and efficient way to manage personal finances. It allows users to track income and expenses, set monthly budgets, and gain insights through summaries and visualizations, all while working completely offline. The tool encourages financial discipline by helping users stay aware of their spending patterns.

Overall, the project met its objectives and proved that even a basic application can offer real value. It serves as a foundation for future upgrades like a graphical interface, recurring entries, and cloud support, making it a useful starting point for building more advanced personal finance tools.

Future Work

- Adding a **Graphical User Interface (GUI)** using Tkinter or PyQt.
- Introducing **recurring transaction tracking** and automatic alerts.
- **Exporting reports** to PDF or Excel for easier sharing.
- Integrating with **cloud databases** for multi-device access.
- Building a **mobile version** of the tracker.
